

gridpulse® SAG, CLEARANCE & CREEP MONITORING

THE ADVANCED WAY TO CAPTURE
ACTIVITY ON YOUR LINE

**Recognize and prevent
dangerous situations
caused by conductor
elongation.**

Transmission lines are built and operated for many years and are continuously exposed to stress. This stress results in permanent elongation of the lines due to conductor creeping or elastic elongation caused by changes in conductor temperature. gridpulse® SAG, CLEARANCE & CREEP MONITORING alerts Transmission System Operators (TSOs) of dangerous situations due to conductor elongation.

gridpulse® SAG, CLEARANCE & CREEP MONITORING detects conductor temperature, sag, clearance and conductor creep. The underlying model considers the data in real time to warn TSOs before dangerous situations occur.

Empowered by gridpulse® SAG, CLEARANCE & CREEP MONITORING, TSOs receive alerts when conductors are approaching critical sag and clearance levels because of ambient conditions or conductor wear.

This helps TSOs to better manage and maintain affected lines.
